A Qualitative Study of a Compassion, Presence, and Resilience Training for Oncology Interprofessional Teams

Author(s): Rinat Nissim, Carmine Malfitano, Mark Coleman, Gary Rodin, & Mary Elliott

Overview
This activity focuses on proposed measures to promote the well-being of oncology health care providers. A qualitative explorative pilot study was employed to evaluate a mindfulness-based group intervention for oncology interprofessional teams. The study’s purpose was to explicate the personal experience of oncology health care providers receiving a mindfulness-based intervention described as Compassion, Presence, and Resilience Training (CPR-T). In addition, the study’s focus was to elicit and describe the personal experience of those oncology health care providers receiving CPR-T in addition to their discernments regarding the benefits, challenges, and risks of the intervention.

Learner Outcomes:
At the conclusion of this activity, learners will be able to:
1. Depict the mindfulness-based intervention described in this mindfulness-based intervention (CPR-T) described in this article.
2. Discuss the concepts identified by the participants.
3. Summarize the challenging and positive recommendations derived from this study.
4. Discuss the implications of employing a multidisciplinary group intervention among integrated oncology teams.
