Reintegration for Post-treatment Cancer Survivors: A Concept Analysis

Author(s): Michelle L. Ore, BSN, RN and Karen J. Foli, PhD, RN, FAAN

Overview
The purpose of this activity is to introduce the theoretical concept analysis of reintegration as a component of healing for cancer survivors who have completed active treatment. Method: The authors used Walker and Avant approach to attain a concept analysis. Findings: The employment of the concept analysis identified reintegration as a dynamic process involving the reorganization of former performance roles concurrent with the reevaluation of personal abilities. Furthermore, reintegration is characterized by dynamic transitional phases that may be cyclical and evolve over time. Conclusion: The incorporation of physical, social, emotional, spiritual, and community/environmental aspects of cancer survivorship experience enhances reintegration.

Learner Outcomes:
At the conclusion of this activity, learners will be able to:
1. Describe the purpose of this article as described by the authors.
2. Discuss how the authors address survivorship as it relates to survivors of cancer.
3. Identify the authors’ purpose in establishing a means for nurses to address survivorship among individuals who are survivors of cancer.
4. Describe the authors’ description of cancer concerns regarding recurrence of cancer.
5. Address the authors’ concept of reintegration among survivors of cancer.

Contact Hours: 4.3

Requirements for Successful Completion
Requirements for successful completion includes: read the entire article, score 70% or better on posttest, complete the online evaluation form.

Conflict of Interest
The planners and faculty have declared no conflicts of interest related to this activity.

Commercial Support
There is no commercial support or sponsorship for this activity

Expiration Date of Contact Hours
Posttest must be completed on or before August 31, 2022
